Nizam Razack, M.D., J.D., F.A.C.S., F.A.A.N.S.

Dr. Nizam Razack is founder and president of Spine & Brain Neurosurgery Center. He is a board certified Neurological Surgeon and licensed Attorney who is committed to educating his patients about their choices. Dr. Razack stands by his patients as they exhaust less invasive options and offers them expert surgical care when it becomes necessary.

Why did you become a neurosurgeon?

I found out in med school that brain surgeons make an immediate impact on improving people's lives. Neurosurgery is also a specialty that is driven by technology, such as use of microscopes, computers and robotics, and that really interested me while I was in training. Being in surgery has become one of my passions.

What type of neurosurgical operations do you do?

I perform microsurgery and minimally invasive surgery for disc problems and pinched nerves of the neck and back. I perform computer-guided brain surgery for tumors and Parkinson's disease. I also do trauma surgery for people who are injured in falls and car accidents.

How do you use your law school education in neurosurgery?

I like to be an advocate for my patients and physician colleagues. Many changes are occurring in medicine because of decisions made by non-physician politicians and hospital administrators. My legal background has given me insight into how these laws and policies come into place and how we as physicians can help provide our patients with quality and cost-effective neurosurgical treatments.

What do you do in your free time?

Aside from spending time with my family, fitness is my other passion. I'm trying to make myself think age is just a number.
